

**Amendments to the Claims:**

*This listing of claims will replace all prior versions, and listings, of claims in the application:*

1.-8. (Cancelled)

9. (Currently Amended) A process for the continuous preparation of a silane of the formula I

which comprises continuously reacting a silane of the formula II

with an alkene of the formula III

in the presence of an iridium compound of the formula IV as catalyst

and free diene as cocatalyst, where

$\text{R}^1$ ,  $\text{R}^2$ ,  $\text{R}^3$  are each a monovalent Si-C-bonded, unsubstituted or halogen-substituted  $\text{C}_1$ - $\text{C}_{18}$ -hydrocarbon radical, a chlorine atom or a  $\text{C}_1$ - $\text{C}_{18}$ -alkoxy radical,

$R^4$ ,  $R^5$ ,  $R^6$  are each a hydrogen atom, a monovalent  $C_1$ - $C_{18}$ -hydrocarbon radical optionally bearing one or more F, Cl, OR,  $NR'_2$ , CN or NCO substituents, a chlorine atom, a fluorine atom or a  $C_1$ - $C_{18}$ -alkoxy radical, where 2 radicals  $R^4$ ,  $R^5$ ,  $R^6$  together with the carbon atoms to which they are bound may form a cyclic radical,

R is a hydrogen atom or a monovalent  $C_1$ - $C_{18}$ -hydrocarbon radical and

diene is a  $C_4$ - $C_{50}$ -hydrocarbon compound optionally bearing one or more F, Cl, OR,  $NR_2$ , CN or NCO substituents and has at least two ethylenic  $C=C$  double bonds,

with the reaction temperature being 30-200°C and the reaction pressure being 0.11-50.0 Mpa, in a mol ratio of alkene (III) to silane (II) such that 0.01 to 100 mol% of (III) is present in excess over (II) when said catalyst is present.

10. (Previously Presented) The process of claim 9, wherein  $R^1$ ,  $R^2$  and  $R^3$  are  $C_1$ - $C_6$ -alkyl radicals,  $C_1$ - $C_6$ -alkoxy radicals, or mixtures thereof.

11. (Previously Presented) The process of claim 9, wherein  $R^5$  and  $R^6$  are  $C_1$ - $C_6$ -alkyl radicals,  $C_1$ - $C_6$ -alkoxy radicals, or mixtures thereof.

12. (Previously Presented) The process of claim 9, wherein  $R^4$  is selected from the group consisting of hydrogen, methyl, and ethyl.

13. (Previously Presented) The process of claim 9, wherein free diene is added as cocatalyst in a concentration of from  $1 \times 10^{-6}$  to 1 mol%, based on the silane component of the formula II.

14. (Previously Presented) The process of claim 9, wherein the reaction temperature is 60-100°C.

15. (Previously Presented) The process of claim 9, wherein the catalyst of the formula IV is  $[(\text{cycloocta-1c,5c-diene})\text{IrCl}]_2$ .

16. (Previously Presented) The process of claim 15, wherein the cocatalyst is 1,5-cyclooctadiene.

17. (Cancelled)

18. (Currently Amended) The process of claim 9, wherein the alkene of formula (III) is present in  $[[0.01]]$  0.1 mol percent to  $[[100]]$  10 mol percent stoichiometric excess relative to the silane of formula (II).

19. (Previously Presented) The process of claim 9, wherein reacting takes place in an aprotic solvent.

20. (Previously Presented) The process of claim 19, wherein the aprotic solvent comprises silane (I).

21. (Previously Presented) The process of claim 9, further comprising separating silane (I) and leaving a high boiling residue, and recycling at least a portion of the high boiling residue as catalyst to the step of reacting.

22. (Previously Presented) The process of claim 9 wherein the free diene is not the same as the diene of the catalyst (IV).
